Welcome

We passionately believe that every single child can achieve academic success and live a life full of opportunity and fulfilment regardless of their starting point. Learning is a science, and following over 40+ years of research into how people think and learn, we now know that what was always perceived as impossible is now possible: there are no restrictions on learning.

When we remove the barriers to achievement, we are reimagining education for a new world with our rigorous, systematic and holistic approach to teaching and learning - a unique evidence-based philosophy and framework that empowers every child.

And when ambitious school leaders work with us to harness our philosophy of empowerment - driven by what we know about how children learn - they create world class schools and equip each child with advanced cognitive skills and the essential values, attitudes and attributes that they will need for lifelong success.

High Performance Learning in a nutshell

High performance is an attainable target for everyone. We can systematically teach students how to be 'intelligent' and to succeed in school and life. We need to methodically develop the cognitive competencies associated with cognitive success and make them the DNA of our teaching.

There are 30 generic competencies students need to develop and these can be grouped into 8 sets and across 5 levels from novice to expert. The more competent students are in each of these the better they will do. Although these are generic competencies, they are best developed through subjects.

High Performance Learning is a teacher's agenda. It happens in the classroom in the hands of a skilled teacher. It is not a one-size-fits-all 'programme' to be followed. Hence schools need to foster a professional community of practice among their educators – no quick-fix, governance model, instructional technique or technology can substitute for this.
